

HAWAI'I ISLAND IS BLESSED WITH AN
ABUNDANCE OF RENEWABLE ENERGY POTENTIAL
INCLUDING ENERGY FROM THE SUN.

CAPTURING THE ENERGY OF THE SUN

ON HAWAI'I
ISLAND

In 2015, Hawai'i took the unprecedented and historical step towards energy self-sufficiency to become the first state in the U.S. to require 100 percent of its electricity to come from renewable sources by 2045.

Our proposed 30 MW Hale Kuawehi Solar Project and 120 MWh battery energy storage system would play a significant role in enabling Hawai'i Island to reduce its dependency on expensive imported oil, help the State achieve its renewable energy goals and provide a reliable and stable source of electricity to consumers.

The solar PV system is designed to charge the battery energy storage system during the day, which will allow room for

future rooftop solar PV installations. The batteries can then provide power at night or when the utility needs it most.

Innergex is committed to working with the community to generate clean, renewable energy that will increase energy self-sufficiency, work in harmony with the environment and encourage stability and affordability.

Reach out to us by email at

INNERGEX

Renewable Energy.
Sustainable Development.

YOUR FEEDBACK MATTERS

We know that successful renewable energy projects are developed with the input and support of local communities. We look forward to hearing your thoughts, comments and suggestions on this project.
