Sustainable Development Policy

Our vision is to provide sustainable energy for a greener future.

Message from the management team

From balance comes sustainability

The Company was born in 1990 from the desire to produce electricity from renewable energy sources. The mission we gave ourselves then remains absolutely relevant today: to increase our production of renewable energy by developing and operating high quality facilities while respecting the environment and balancing the best interests of the host communities, our partners, and our investors. We have come to know that sustainable development isn't just about what we do – producing renewable energy – but also about how we do it. Our success over the years has been founded on developing and operating good projects, which we have found to mean projects that strike a fair and reasonable balance between economic, environmental, and social considerations.

Purpose of this Policy

This policy articulates Innergex's commitment to integrating sustainable development considerations in all aspects of its business, including its strategic planning, decision-making, management, and operations.

Policy Statement

At Innergex, we believe that the three pillars of sustainability – economic development, social development and environmental protection - are mutually reinforcing. In conducting our business we strive to achieve a balance between economic, social and environmental consideration and we commit to plan, decide, manage, and operate through the lens of sustainable development. We recognize this to be a continuous improvement process, rooted in transparency of our objectives, actions, and results.

Innergex adheres to the following key principles in order to provide a solution to the energy challenges of both today and tomorrow, to protect the environment while optimizing the use of natural resources to produce electricity, and to earn and sustain its social acceptability:

1. We believe that people should have access to reliable, affordable, clean and renewable energy.
2. Climate change is real. We believe that renewable energy is part of the solution to climate change.
3. We believe in a level playing field in electricity procurement. We support carbon pricing or any other means of internalizing environmental and social costs in the price of electricity.
4. We believe in the protection of our environment and in the responsible development of natural resources. We support a comprehensive and efficient regulatory and planning framework.
5. We believe that social acceptance is the cornerstone of successful project development and that strong projects are built on long-term cooperation with stakeholders and by working in collaboration with First Nations and local communities.
6. We believe in long-term sustainable development that balances social, environmental, and economic imperatives.
7. We believe in lasting relations with our employees, our partners, and our external stakeholders built on respect, transparency, and integrity.
8. We believe that Innergex can effect change.

Definition of sustainable development and sustainable energy

Definition of sustainable development

Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs. It is development that strikes a balance between economic, environmental, and social considerations.

Definition of sustainable energy

Sustainable energy is energy that comes from sources that are quickly and naturally replenished on a human timescale (such as sunlight, wind, rain, tides, waves and geothermal heat) and that can be used without any significant negative impact to the environment.

Our Commitment

Integrate sustainable development considerations into all aspects of our business, encourage our employees to do the same in performing their work, and promote sustainable development practices among our partners and service providers.

Build genuine and respectful relations with our stakeholders and partners, by engaging and interacting regularly.

Strive to continuously improve our sustainable development practices, by measuring, managing, and reporting with transparency on key issues that are material to Innergex, its partners, and its stakeholders.
