**News Release
For Immediate Distribution**

**INNERGEX BEGINS COMMERCIAL OPERATION OF
THE 21.2 MW TRETHERWAY CREEK HYDRO FACILITY**

- Contribution to the Corporation's annual revenues of approximately \$8.7 million
- Electricity to power more than 7,300 British Columbia households each year
- Completed on time and under budget

LONGUEUIL, Quebec, November 9, 2015 – Innergex Renewable Energy Inc. (TSX: INE) ("Innergex" or the "Corporation") has begun commercial operation of the 21.2 MW Tretheway Creek run-of-river hydroelectric facility located in British Columbia, Canada.

"We are pleased to have commissioned our 34th facility, reinforcing our leadership position among independent power producers in British Columbia and, indeed, in Canada, with a gross installed capacity totaling more than 1,200 MW. This project was realized thanks to the support and collaboration of the Douglas and Sts'ailes First Nations, with whom we enjoy solid long-term relations", states Michel Letellier, President and Chief Executive Officer of the Corporation.

The 21.2 MW Tretheway Creek hydroelectric facility is located on Crown land, approximately 50 km north of the community of Harrison Hot Springs, British Columbia. Construction began in 2013 and was completed in mid-October of this year, on time and approximately \$7 million under budget. The COD certificate has been approved by BC Hydro with an effective commissioning date of October 27, 2015.

Tretheway Creek's average annual production is estimated to reach 81,000 MWh, enough to power more than 7,300 BC households. In its first full year of operation, it is expected to generate revenues and Adjusted EBITDA of just under \$8.7 million and \$7.2 million respectively. All of the electricity it produces is covered by a 40-year fixed-price power purchase agreement with BC Hydro, which was obtained under that province's 2008 Clean Power Call Request for Proposals and which provides for an annual adjustment to the selling price based on a portion of the Consumer Price Index.

About Innergex Renewable Energy Inc.

Innergex Renewable Energy Inc. (TSX: INE) is a leading Canadian independent renewable power producer. Active since 1990, the Corporation develops, owns, and operates run-of-river hydroelectric facilities, wind farms, and solar photovoltaic farms and carries out its operations in Quebec, Ontario, British Columbia, and Idaho, USA. Its portfolio of assets currently consists of: (i) interests in 34 operating facilities with an aggregate net installed capacity of 708 MW (gross 1,216 MW), including 27 hydroelectric operating facilities, six wind farms, and one solar photovoltaic farm; (ii) interests in four projects under development or under construction with an aggregate net installed capacity of 187 MW (gross 297 MW), for which power purchase agreements have been secured; and (iii) prospective projects with an aggregate net capacity totaling 3,190 MW (gross 3,330 MW). Innergex Renewable Energy Inc. is rated BBB- by S&P.

The Corporation's strategy for building shareholder value is to develop or acquire high-quality facilities that generate sustainable cash flows and provide an attractive risk-adjusted return on invested capital, and to distribute a stable dividend.

Non-IFRS measures disclaimer

Readers are cautioned that Adjusted EBITDA is not a measure recognized by IFRS and has no standardized meaning prescribed by it, and therefore may not be comparable to those presented by other issuers. Innergex believes that this indicator is important, as it provides management and the reader with additional information about its cash generation capabilities and facilitates the comparison of results over different periods. References in this press release to "Adjusted EBITDA" are to revenues less operating expenses, general and administrative expenses and prospective project expenses. Readers are cautioned that Adjusted EBITDA should not be construed as an alternative to net earnings as determined in accordance with IFRS.

Forward-Looking Information Disclaimer

In order to inform readers of the Corporation's future prospects, this press release contains forward-looking information within the meaning of applicable securities laws ("Forward-Looking Information"). Forward-Looking Information can generally be identified by the use of words such as "projected", "potential", "expect", "will", "should", "estimate", "forecasts", "intends", or other comparable terminology that states that certain events will or will not occur. It represents the estimates and expectations of the Corporation relating to future results and developments as of the date of this press release. It includes future-oriented financial information, such as expected production, revenues and Adjusted EBITDA, to inform readers of the potential financial impact of the Tretheway Creek hydroelectric facility. Such information may not be appropriate for other purposes.

Forward-Looking Information in this press release is based on certain key expectations and assumptions made by the Corporation. The following table outlines Forward-Looking Information contained in this press release, the principal assumptions used to derive this information and the principal risks and uncertainties that could cause actual results to differ materially from this information.

Principal Assumptions	Principal Risks and Uncertainties
Expected production For each facility, the Corporation determines a long-term average annual level of electricity production ("LTA") over the expected life of the facility, based on engineers' studies that take into consideration a number of important factors: for hydroelectricity, the historically observed flows of the river, the operating head, the technology employed and the reserved aesthetic and ecological flows. Other factors taken into account include, without limitation, site topography, installed capacity, energy losses, operational features and maintenance. Although production will fluctuate from year to year, over an extended period it should approach the estimated long-term average.	Improper assessment of water resources and associated electricity production Variability in hydrology Equipment failure or unexpected operations and maintenance activity Natural disaster
Projected Revenues For each facility, expected annual revenues are estimated by multiplying the LTA by a price for electricity stipulated in the power purchase agreement secured with a public utility or other creditworthy counterparty. These agreements stipulate a base price and, in some cases, a price adjustment depending on the month, day and hour of delivery. In most cases, power purchase agreements also contain an annual inflation adjustment based on a portion of the Consumer Price Index.	Production levels below the LTA caused mainly by the risks and uncertainties mentioned above Unexpected seasonal variability in the production and delivery of electricity Lower-than-expected inflation rate
Projected Adjusted EBITDA For each facility, the Corporation estimates annual operating earnings by subtracting from the estimated revenues the budgeted annual operating costs, which consist primarily of operators' salaries, insurance premiums, operations and maintenance expenditures, property taxes and royalties; these are predictable and relatively fixed, varying mainly with inflation (except for maintenance expenditures).	Variability of facility performance and related penalties Changes to water and land rental expenses Unexpected maintenance expenditures Changes in the purchase price of electricity upon renewal of a PPA

The material risks and uncertainties that may cause actual results and developments to be materially different from current expressed Forward-Looking Information are referred to in the Corporation's Annual Information Form in the "Risk Factors" section and include, without limitation: the ability of the Corporation to execute its strategy for building shareholder value; its ability to raise additional capital and the state of capital markets; liquidity risks related to derivative financial instruments; variability in hydrology, wind regimes and solar irradiation; delays and cost overruns in the design and construction of projects; uncertainty surrounding the development of new facilities; variability of installation performance and related penalties; and the ability to secure new power purchase agreements or to renew existing ones.

Although the Corporation believes that the expectations and assumptions on which Forward-Looking Information is based are reasonable, readers of this press release are cautioned not to rely unduly on this Forward-Looking Information since no assurance can be given that they will prove to be correct. The Corporation does not undertake any obligation to update or revise any Forward-Looking Information, whether as a result of events or circumstances occurring after the date of this press release, unless so required by legislation.
