Jimmie Creek Run-of-River Power Plant

Environmental Management

The Jimmie Creek Run-of-River Power Plant is operated in a manner that respects and protects the environment in which it operates. Facility operations are conducted in accordance with an Environmental Management System (EMS) to ensure sound environmental management and compliance with regulatory and permit requirements.

In addition to the EMS, the following monitoring programs are planned for 2022:

- Water Compliance Monitoring – monitoring the instream flow requirement, maximum diversion and ramping (start-up and shut down) rates;
- Revegetation Success Monitoring – additional planting of native species in disturbed areas.
